Pack Outside: Pack features two small quick access outer pockets on each side and one main zipper pocket on the front. Top and side handles plus concealed adjustable shoulder, sternum, and waist straps allow for a variety of carrying methods. Four reinforced loop attachments allow for securing the pack to a structure, vehicle or aircraft. Features five compression straps to ensure the thinnest profile and to backup a failed zipper. The main compartment and the four outer pockets have drain holes to minimize weight in austere conditions. Pack is MOLLE compatible with PALS webbing system.

Pack Inside: Upon opening, one reveals a large internal compartment that comes with seven interchangeable, removable mesh supply pouches (4 smaller, 2 medium and 1 large). Pouches are secured with two wide Velcro strips running the length of the pack. One long pocket sits behind where the pouches attach. The pack comes with nine removable labels covering *Bandage 1, Bandage 2, IV, Airway, Chest* and four blank labels for later customization. The opened flap holds two permanent zipper mesh pockets. At the base of the compartment you will find an adjustable retention strap to secure loose gear. Pack is hydration compatible with a bladder compartment and hose outlet.
